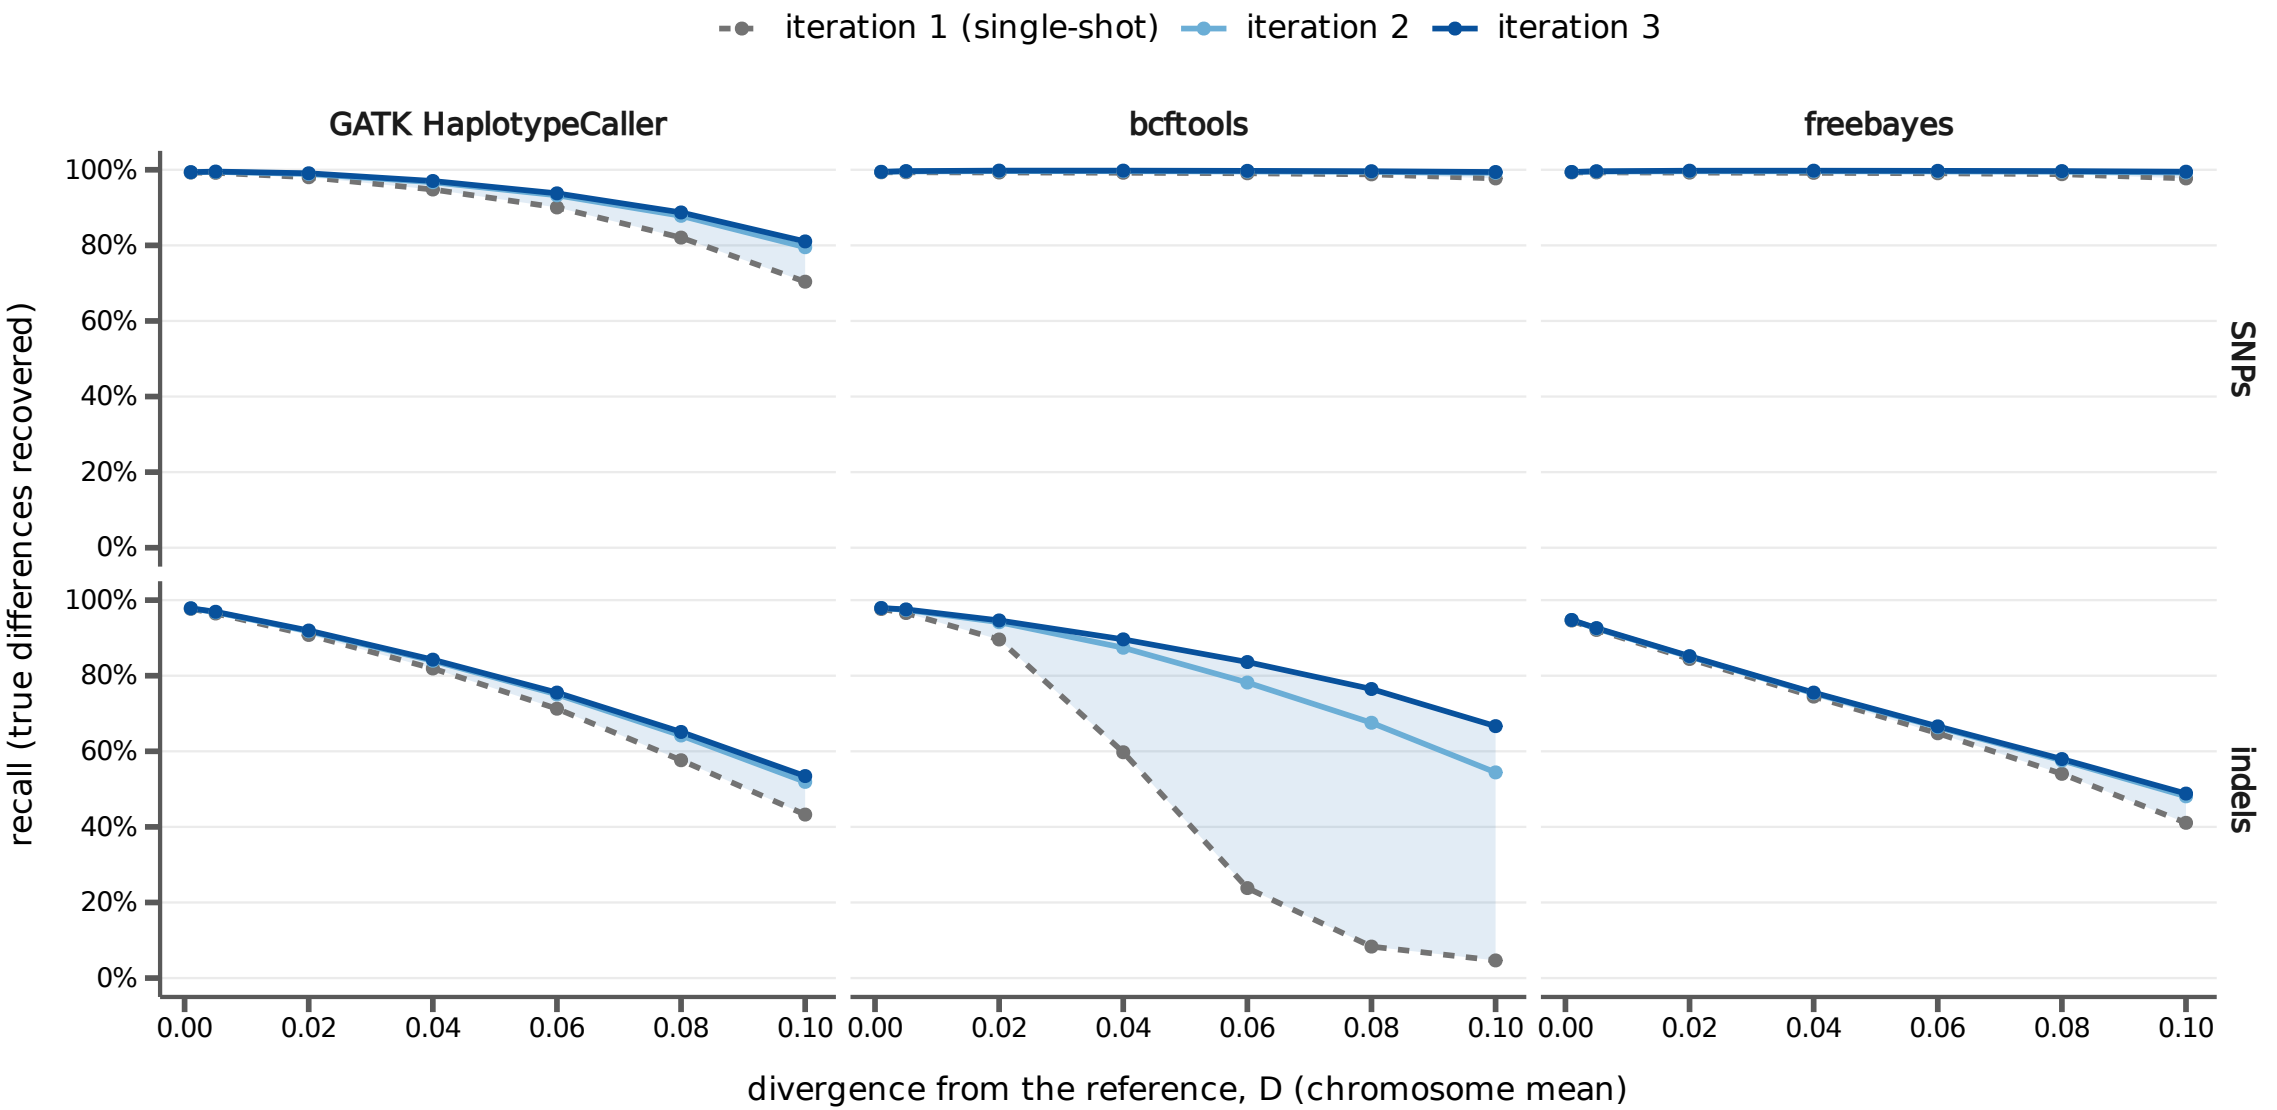
Iterative mapping recovers much of the loss

Shaded band = recall gained from iteration 1 to iteration 3. Uniform divergence.



Data: s01 (SNPs, mean of 3 seeds) and s02 (indels, seed 42) uniform-divergence simulations of mouse chr19 at 30×;
each iteration remaps to a consensus built from the previous iteration's calls (bcftools consensus); calls scored in mm39 coordinates.
