Two failure modes: calling fails first, then mapping

Each bar = all sampled divergent SNPs whose surrounding 300 bp is diverged to that degree; bars stack to 100 %.

Data: s05 realistic field, mean D = 0.03, mason true read origins (variant_read_fate.py --pileup).
Bin edges: 0, 0.02, 0.04, 0.06, 0.08, 0.1, 0.13, 0.16, 0.2, 0.25; bins with ≤ 50 sites dropped; x cut at 0.25 (99.9th percentile).
Mapping-limited = < 2 variant-carrying reads aligned at the site; calling-limited = ≥ 2 present but not called.
