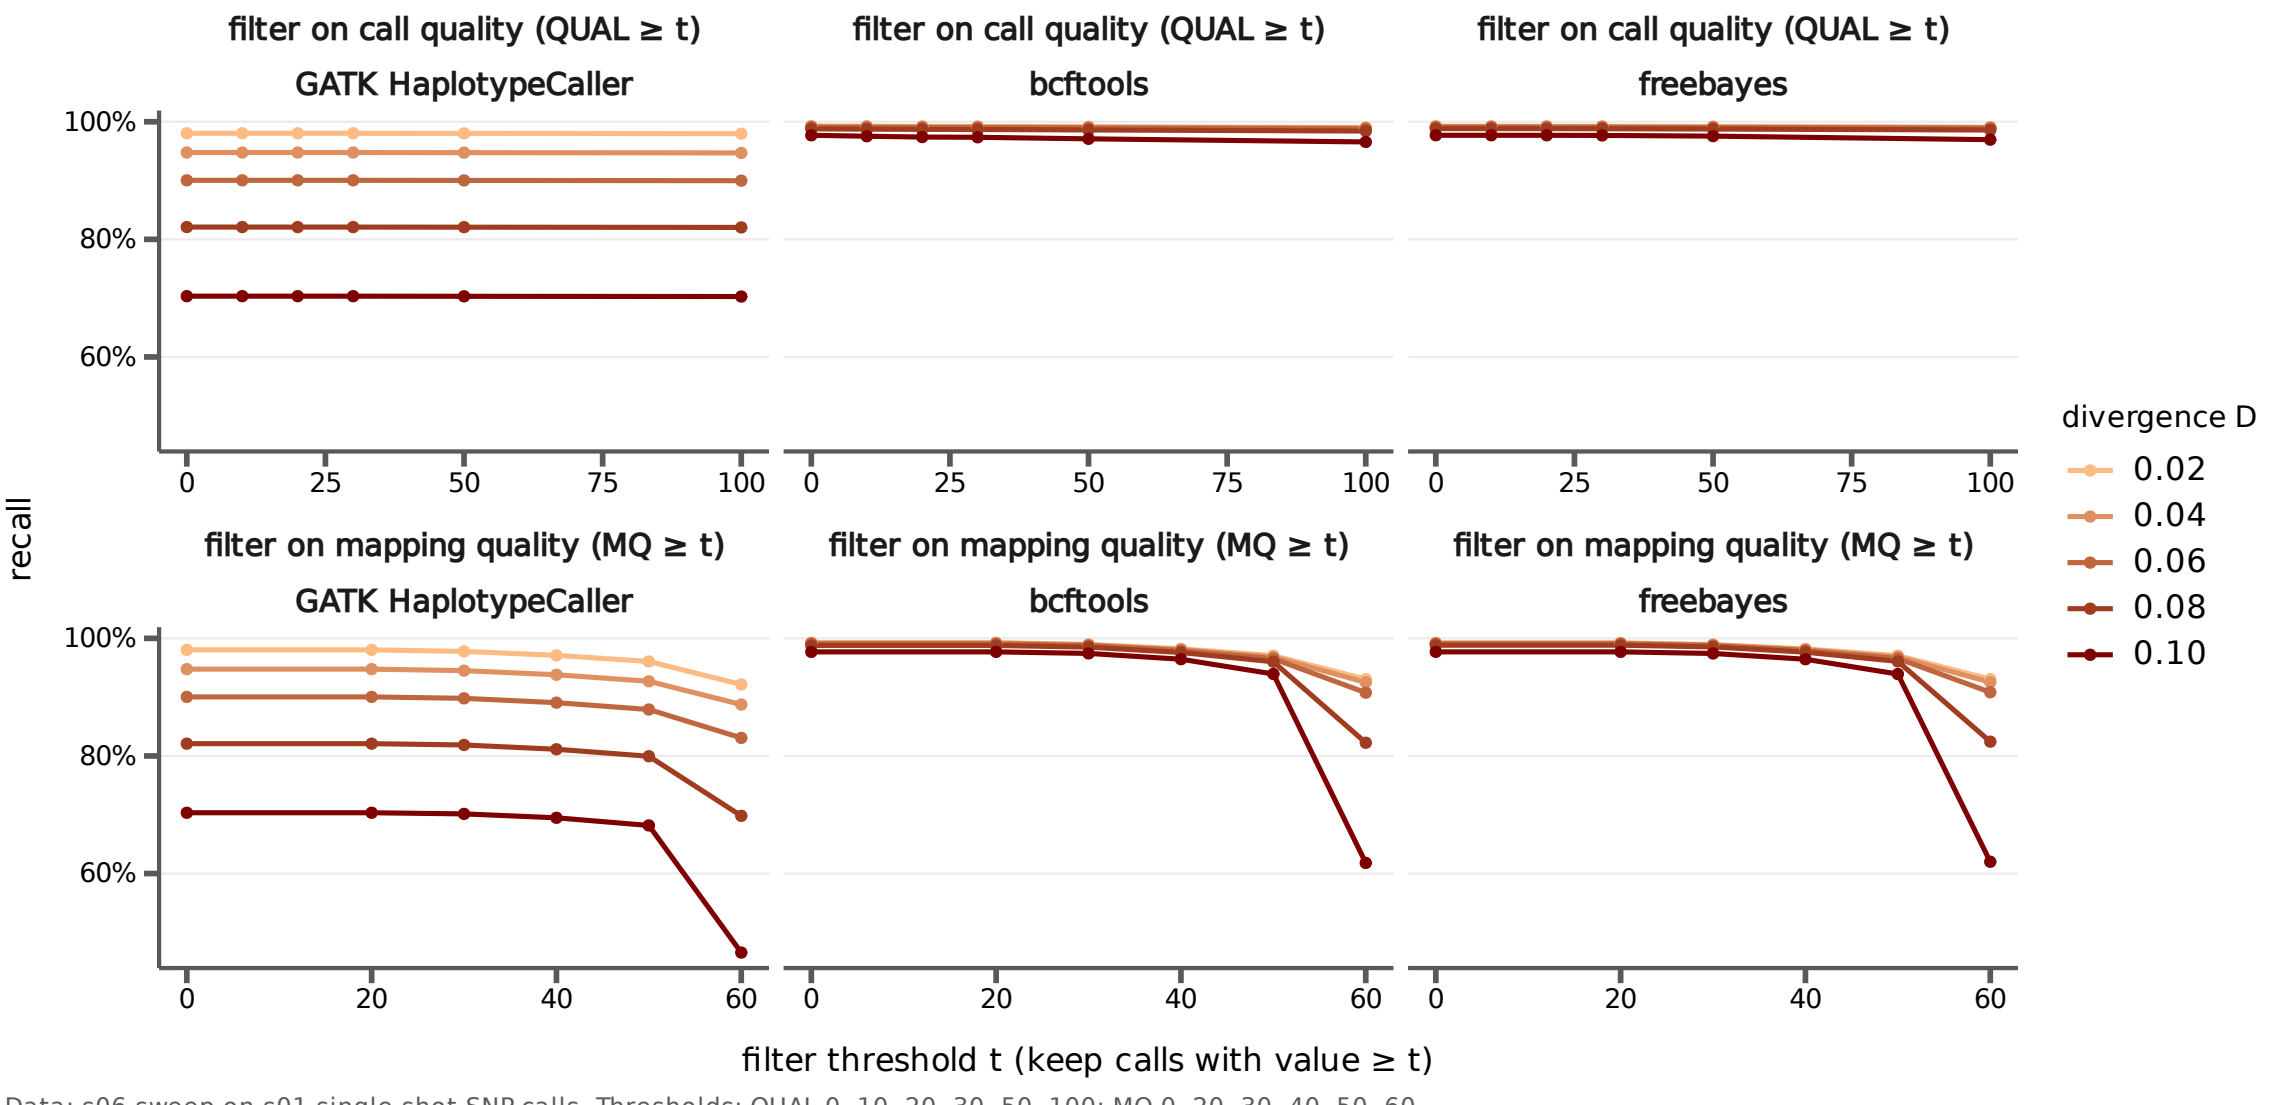
Filtering can't bring lost differences back — and filtering on mapping quality makes the bias worse

Recall after a hard filter; t = 0 is unfiltered. A filter can only remove calls, so lines can only go down.



Data: s06 sweep on s01 single-shot SNP calls. Thresholds: QUAL 0, 10, 20, 30, 50, 100; MQ 0, 20, 30, 40, 50, 60 (MQ = INFO/MQ for GATK and bcftools, INFO/MQM for freebayes).
